

TBVE007

Choosing the correct Toyota EGR valve Auris/Avensis/Corolla 2.2 litre - VE360193 and VE360262.

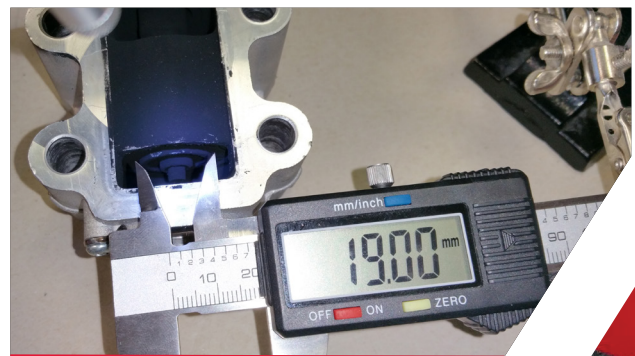

There are two EGR valves catalogued for a variety of Toyota Auris/Avensis/Corolla 2.2 litre diesel models with no easy way to determine the correct one, as there are no external differences. Even at OE level, they are often both listed for the car when searched by chassis number.

It is important to identify the correct replacement part, and this is only possible following the removal of the old valve from the car, and measuring it. The key difference is the size of the head of the actual valve. One is 14.5mm and the other is 19mm diameter.

The position of the valve is pictured below to help you to identify the difference in size.

VE360193

VE360262

When the size of the valve is known, the correct Cambiare part can be supplied.

VE360193 HAS THE 14.5MM VALVE.

(OE's 256200R020, 256200R021, 256200R022, 2562026090, 2562026091, 2562026110, 2562026111, 2562026112).

VE360262 HAS THE 19MM VALVE.

(OE 256200R010, 256200R011, 256200R012)
